Flow

Justinmind

SUMMARY

Anton is a senior software engineer and technical leader/manager. He specializes in building, architect and plan high-load, complex Web & Mobile applications; creating IT departments for professional companies, managing projects from A to Z. Anton's expertise includes software development, preparing work environments, implementing CI/CD, server installation, and automating application deployment/delivery. Anton's proficiency as a Symfony developer is exceptional. He has extensive experience in designing, developing, and maintaining complex web applications using the Symfony PHP framework. Anton's proficiency in Symfony framework components, PHP, and object-oriented programming principles is remarkable, as is his ability to write clean, efficient, and maintainable code using best practices and design patterns and lead others. His experience in the field has given him an exceptional understanding of software development best practices and agile methodologies. Anton has 12+ years of experience as a Symfony expert and work totally more than 15 years in IT. Large international experience. This specialist can realize really difficult tech tasks with strong patterns: Solid, Dry, KISS, DDD, CQRS, Event Sourcing, Hexagonal architecture, microservices architecture and so on.
